

PARTH DESAI

Full Stack Developer

+91 79901 42491 | parthdesai718@gmail.com | [Portfolio](#) | [Linkedin](#) | Surat, India

PROFESSIONAL SUMMARY

Experienced Full Stack Developer with 2+ years of experience developing scalable web applications and cloud-based microservices. Proficient in React, Next, Node.js(Express and Nest), with deep expertise in both front-end and back-end development. Skilled in RESTful APIs, microservice architecture, query optimization, and secure deployments, with a strong focus on performance, maintainability, and team collaboration. Adept at mentoring developers, gathering requirements, and working in Agile/Scrum environments to consistently deliver robust, production-ready solutions.

CORE COMPETENCIES

- Front-End Technologies: React, Next, Redux, Tailwind CSS, Mui, Bootstrap V5
- Back-End & Frameworks: Node.js, Express.js, Nest.js, Object-Oriented Programming
- Programming Languages: JavaScript, TypeScript
- Database Management: MySQL, PostgreSQL, MongoDB, Redis, Supabase
- Project & Workflow Tools: Git, Jira, Notion
- Microservices & APIs: RESTful APIs, Webhooks, Authentication (Next-Auth/Auth.js, JWT),
- Professional Skills: Requirement Gathering & Analysis, Problem Solving, Strategic Thinking, Leadership, Agile Project Management, Communication
- Soft Skills: Adaptability, Time Management, Attention to Detail, Work Ethic

WORK EXPERIENCE

Codehawk Technologies

Surat, India | January 2024 - Present

Full Stack Developer

March 2024 - Present

- Spearheaded end-to-end development initiatives, transforming complex business requirements into scalable, enterprise-grade solutions, cutting delivery timelines by 25%.
- Engineered and architected full-stack modules with high-performance backend logic and optimized database designs, driving significant gains in system reliability, speed, and maintainability.
- Redesigned data architecture and query execution strategies, achieving 20% faster performance while safeguarding data integrity and consistency.
- Orchestrated secure deployment pipelines and technical documentation, reducing post-release issues by 40% and accelerating feedback cycles.
- Influenced strategic technology adoption by selecting frameworks and tools that ensured long-term scalability, cost efficiency, and competitive advantage.
- Drove Agile/Scrum collaboration with Product Owners, QA, and cross-functional stakeholders, consistently delivering high-priority features on schedule.

Full Stack Developer Intern | January 2024 – March 2024

- Developed and deployed full-stack web applications in an Agile environment, converting business requirements into scalable, production-ready solutions.
- Built and optimized RESTful APIs with efficient database queries, ensuring high-performance, reliable, and consistent backend services.
- Adopted modern coding practices including pair programming, modular design, and reusable components, which improved maintainability and reduced defects in production.
- Monitored and supported live applications, proactively resolving issues and implementing performance refinements to maintain 95%+ uptime and smooth user experience.

PROJECTS

Drevo AI (Viral Content Intelligence)

Tech Stack: Next.js, React.js, Redux Query, Zustand, Redis, D3.js | [Project Link](#)

- Developed frontend architecture for AI-powered content analysis platform tracking 10M+ viral posts across major social media platforms, enabling users to analyze and replicate successful content patterns.
- Implemented advanced state management using Redux Query for API calls and Zustand for global context, optimizing data flow and reducing unnecessary re-renders by 30%.
- Integrated Redis caching layer for frequently accessed viral content data, reducing API response times by 45% and improving user experience.
- Built responsive, real-time dashboard showcasing viral post hooks, structure analysis, and timing patterns using Next.js server components and D3.js visualizations.

Multi-Tenant SaaS Platform for Hotel/Restaurant Customer Feedback Management

Tech Stack: React.js, Node.js, Nest.js, Tailwind CSS, Redux, PostgreSQL, ImageKit, Redis, Chart.js, D3.js, Twilio

- Engineered multi-tenant SaaS platform enabling hotels/restaurants to create customizable feedback forms (Google Forms-like) with QR codes/links for seamless customer review collection via SMS, Email, and WhatsApp.
- Implemented automated review campaign system processing 50K+ messages monthly using queue-based architecture (Bull/Redis) for reliable, high-volume delivery and real-time sentiment analysis.
- Designed intuitive dashboards for hotel owners to track all submissions, monitor NPS/CSAT scores, and visualize positive/negative trends via interactive charts, word clouds, and sentiment breakdowns (Chart.js, D3.js).
- Built end-to-end workflow: form builder → QR/link generation → multi-channel submission → aggregated analytics, empowering businesses to act on customer insights instantly.
- Integrated ImageKit for media handling and PostgreSQL for scalable multi-tenant data storage, ensuring robust performance across 100+ hospitality clients.

Theora (E-Learning Platform)

Tech Stack: ReactJs, NextJs 13, MongoDB, tailwind css, ExpressJs, TypeScript, Redis ,Cloudinary

- Developed a scalable Learning Management System (LMS) enabling seamless course creation, enrollment, and progress tracking.
- Delivered responsive, user-friendly interfaces using React, Next.js 13, and Tailwind CSS, enhancing learner engagement.
- Integrated custom APIs and third-party services (e.g., Cloudinary for media storage) to extend platform functionality.
- Improved application reliability and speed through Redis caching and session management.

Next-door (Estate Marketplace)

Tech Stack: React, Express, Node js, tailwind css, ExpressJs, TypeScript, Next Auth, Redux, MySQL.

- Engineered a full-featured real estate marketplace for property listing, searching, and user interaction.
- Designed a robust backend architecture with Node.js, Express.js, and MySQL, ensuring reliable data storage and retrieval.
- Implemented centralized state management using Redux for smooth and interactive user experiences.
- Created intuitive and responsive UI with React, Next.js, and Tailwind CSS, improving usability across devices.
- Secured user authentication and sessions via Next Auth, strengthening platform reliability and trust.

Real-Time Disaster Response Coordination Platform

Tech Stack: Node.js, Nest.js, Clerk, Stripe, Supabase, Redis, PostgreSQL

- Engineered backend for emergency response system coordinating 10K+ volunteers across 50+ disaster zones, enabling 2-hour response time reduction via real-time resource matching.
- Implemented Clerk auth for multi-agency access (NGOs, govt, hospitals) and Stripe for micro-donations funding 100K+ relief kits with automated fund allocation.
- Built geolocation-aware queue system (Bull/Redis) processing 50K+ daily aid requests, matching supplies/volunteers to needs with ML-powered priority scoring.
- Developed Supabase real-time APIs for live incident tracking, resource inventory, and coordination dashboards, syncing data across 500+ field teams seamlessly.

EDUCATION

Bachelor of Computer Applications

Surat, India | July 2021 to March 2024

SDJ International Collage
